Analysis of scenarios for Dörpum

In three scenarios degrees of autarky and self-consumption were simulated for our demonstration site Dörpum. Get an idea on how the use of storage can lead to a high autarky level.

Network survey underlines the interest in carpeDIEM's work

Our small network survey at the beginning of the year revealed an overall enthusiastic and positive feedback and made clear, that our newsletter is a major source of information to our network partners along with the network meetings twice a year. More than 60% of our network partners have a work based interest in carpeDIEM and we can assist them in making new contacts. On the other side a couple of partners also follow us because of their private interest in the topic and because they think it is important to support the project.

We would like to thank you for this positive feedback and stay open for suggestions. We'll continuously work on an improved information policy especially as new results come up in 2018.

A quarter of our network partners have answered the questionnaire.
